

PYTHON

While Loop

- Python While Loop

While loop will help to execute the set of statements as long as a condition is true.

- Python While Loop

Syntax:

```
while expression:  
    statement(s)
```

- Python While Loop

Coding

- Single statement while block

Coding

- Python Loop Control Statements :
 - while loop with continue statement
 - while loop with break statement
 - while loop with pass statement

● Python Loop Control Statements :

Coding

- While loop with else

Make sure to run block of code once, when the while condition no longer is true. And while also do not have "break" condition .

Coding
